## **DETAILED ACTION**

# Specification

1. The abstract of the disclosure is objected to because it exceeds the limit of 150 words. Correction is required. See MPEP § 608.01(b).

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 2, 4, 7, 8, 15, 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Levy (US 5,923,892) of record in parent application, in view of Marsh (US 5,621,434) of record in parent application.

Regarding claim 1, the claimed apparatus for accelerating a processor running an object-oriented programming language including hardware accelerator interfaced with said processor for implementing at least one application framework is met by the system of Levy comprising a host processor and coprocessor, the coprocessor executing platform-independent code to free the host processor for other tasks (see column 5, lines 38-42, column 6, lines 23-37). Claim 1, lines 4-6 "wherein said at least one application framework comprises a set of classes that embodies an abstract design for solutions to a number of related problems" merely read on the well known definition of an application framework as shown by Marsh (see column 4, line 44- column 6, line

Art Unit: 2171

65). Clearly, the system of Levy includes such a framework since a set of classes is indispensable to implement the Java virtual machine (see column 6, lines 50-56). The claimed software stub is met when Levy shows that the procedure by which the host processor controls the coprocessor may be set forth in software (see column 6, lines 33-36).

Claim 15 merely differs from claim 1 by "a means for a software stub" instead of "a software stub", thus is rejected for the same reasons stated in claim 1 above.

Regarding claims 2, 16, the claimed hardware object management system interacting with said hardware accelerator merely manages instances of said application framework and the states of values assigned to said instances. Although not specifically shown by Levy, such a hardware object management system interacting with said hardware accelerator is indispensable to keep track of application instances in an object oriented environment. Therefore, it would have been obvious to one of ordinary skill in the art to include a hardware object management system while implementing the system of Levy in order to keep track of application instances.

Claim 4 corresponds to the method of claim 1, thus is rejected for the same reasons discussed in claim 1 above.

Regarding claim 7, although Levy does not explicitly mention that the hardware accelerator implements the Java.NET and Java.IO application frameworks, it is well known in the art that Java.NET is a core application framework providing classes for networking support and Java.IO provides the input and output classes for writing to and reading from streams and handling files. Therefore, it would have been obvious to one

Page 4

Application/Control Number: 09/886,167

Art Unit: 2171

of ordinary skill in the art to include a Java.NET circuit to implement the Java.NET and Java.IO frameworks in the coprocessor of Levy in order to provide networking capability and alleviate the load of the main processor.

Regarding claim 8, a windowing /view system and a connectivity engine as claimed are indispensable to any Java user interface-based applet and application in a network system. Therefore, it would have been obvious to one of ordinary skill in the art to include the claimed steps and to use the connectivity engine in said Java.NET circuit while implementing the method of Levy for the Java.NET and Java.IO frameworks to function.

### **Double Patenting**

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-37 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-26 of U.S. Patent No. 6,330,659. Although the conflicting claims are not identical, they are not patentably distinct from each other because:

Application/Control Number: 09/886,167

Art Unit: 2171

Claims 1, 2, 3, 11, 12 and 15, 16, 17, 18, 19 of the present application merely repeat the features of claim 1 of the parent application, now US 6,330,659 with fewer limitations. However, it is obvious to remove limitations from a claim.

Claims 4-10, 13, 14 of the present application merely repeat the features of claim 11 of the parent application now US 6,330,659 with fewer limitations. However, it is obvious to remove limitations from a claim.

Claims 20-27, 28-37 of the present application merely repeat the features of claims 1, 12 of the parent application now US 6,330,659.

#### Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Uyen T. Le whose telephone number is 703-305-4134. The examiner can normally be reached on M-F 7:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Safet Metjahic can be reached on 703-308-1436. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3900.

Uyen Le
